# THE ECONOMIC IMPACT OF THE BEER SECTOR IN SOUTH AFRICA

A report by

**OXFORD  
ECONOMICS**

# FOREWORD

The Beer Association of South Africa (BASA) brings together the main beer manufacturers in the country namely, CBASA (Craft Brewers Association of South Africa), HEINEKEN South Africa and South African Breweries (SAB).

It represents the unified voice of the beer industry committed to championing both the regulatory differences of beer as an excisable product and to affirm beers' position as a low alcohol product of choice that has a significant socioeconomic contribution to South Africa.

BASA is proud to champion the 2022 Oxford Economics Report which consolidates the economic impact of the beer industry in South Africa. Intuitively we have known that beer has played an integral role in South African culture and enjoyed a socioeconomic footprint for over a hundred years. What this report does is provide key data regarding our economic impact across the beer value chain.

Some of the highlights coming out of the latest Report is that in 2019 the beer industry contributed R71 billion gross value added to South Africa's GDP. This means that R1 in every R79 of GDP produced in South Africa is linked to our local beer industry, which also supports an estimated 249 000 jobs in South

Africa, this is equivalent to 1 in 66 local jobs coming from the beer industry. Tax payments directly stimulated by the South African beer sector totaled R43 billion – of this, R26 billion is estimated to have come from value- added tax and excise duties from beer sales.

Beer is a naturally low-alcohol, perishable product, that remains close to its agricultural roots and depends on local storage and distribution to get to consumers. Beer agriculture has seen the sustainable growth of barley production in our local economy over the years, with over 380 barley producers in the Overberg and Swartland regions and over 150 barley producers in Prieska, Hartswater, Brits, Thabazimbi, Douglas and Modderivier who also employed thousands of workers.

In addition to this, thousands of small businesses who support their communities have grown through the beer value chain.

This includes over 140 craft breweries across the country who are producing world-class beers and who offer the opportunity to create a thriving beer tourism sector in our country, which can create even more jobs and further position South Africa as a leading tourism destination.

It is clear that when South Africans support the local beer industry, they support a rich tapestry of livelihoods including rural workers and small businesses owners. BASA remains committed to working with all its partners to continue promoting the responsible consumption of beer in communities and to ensure the sustainable and inclusive growth of our rich and diverse industry. We are proud to be an industry that helps move the country forward into greater socioeconomic prosperity.

# INTRODUCTION

A significant number of people cooperate across multiple sectors in South Africa to make and distribute beer to consumers in the country—and elsewhere in the world where South Africa is part of the value chain. That includes South Africans who grow raw materials like barley and hops, manufacture beer packaging, brew beer, transport beer, and sell beer at shops, restaurants, and entertainment venues. It also includes people in South Africa who contribute indirectly, by supplying specialised equipment and services to beer manufacturers and distributors, as well as to companies in the beer sector’s wider supply chain.

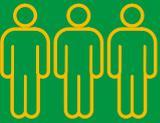

In this report we assess the important role that beer plays in the South African economy in 2019.<sup>1</sup> We quantify this role in terms of the gross value added contribution to GDP, jobs, and tax revenues supported by the beer sector.<sup>2</sup>

This assessment spans three channels of impact: the economic activity generated at beer manufacturers’ and distributors’ operational sites (direct impact), economic activity stimulated by beer manufacturers and distributors buying inputs of goods and services from third party suppliers (indirect impact), and further activity supported in the consumer economy when the beer sector pays wages to its employees (induced impact).

The largest share of the impact of beer in South Africa’s economy arises from beer manufacturers making and selling beer locally. However, we also quantify the economic activity that occurs because South African businesses export beer, as well as materials, products, and services that are consumed, used to make beer, or used in other parts of the supply chain that is stimulated by the beer sector in other countries.<sup>3</sup>

 <p><b>R 13 bn</b> in tax payments to the government</p>	<p><b>R 31 bn</b> in tax payments to the government</p>	<p><b>R 43 bn</b> in tax payments to the government</p>

<sup>1</sup> The study relies on 2019 data (instead of 2020) because of the distortions caused by COVID-19. The effects of the pandemic mean that 2019 is more representative of a normal year for the beer sector. In addition, the analysis for this report was conducted in USD, and the values have been converted to R throughout at an exchange rate of 1 USD = 14.45 R.

<sup>2</sup> Gross domestic product (GDP) is the most commonly used metric to describe the size and health of an economy. It is the total value of final goods and services produced in the economy within a year. After adjustments for taxes and subsidies, the sum of all gross value added created by all firms and industries in an economy is equal to GDP. Gross value added for an individual beer manufacturer, beer distributor, retailer, or hospitality firm is equal to the revenue it generates in a year less the cost of the bought-in goods and services used up to generate that revenue.

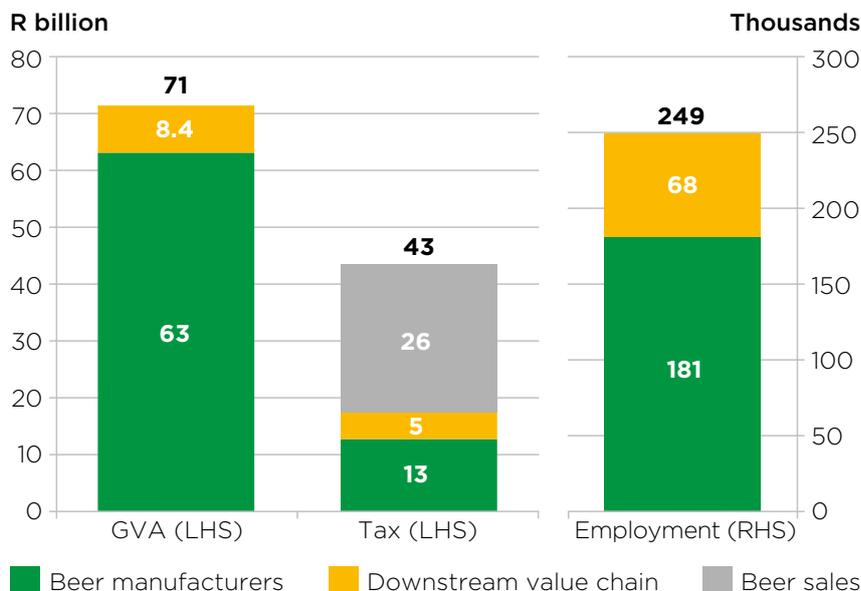

<sup>3</sup> The global beer sector, for the purposes of this report, comprises the beer manufacturers and distributors in South Africa and 69 other countries that, together, make up 89% of global beer sales.

# BEER SECTOR'S TOTAL IMPACT IN SOUTH AFRICA

In 2019, we estimate that beer supported a R 71 billion gross value added (GVA) contribution to South Africa's GDP.<sup>4</sup> This contribution represented about 1.3% of the South African economy, or R 1 in every R 79 of GDP produced in South Africa in 2019.<sup>5</sup>

**Total GVA, employment and tax supported by the beer sector in South Africa, 2019**

Source: Oxford Economics

**R1 in every R79 of GDP**

The beer sector was linked to R 1 in every R 79 of GDP in South Africa.

The magnitude of that impact is equivalent to 25% of all the GVA created in the city of Pretoria in 2019.<sup>6</sup> Of this, we estimate that the process of making beer by beer manufacturers supported R 63 billion (88% of the total contribution), while the remaining R 8 billion (12% of the total) was supported by beer's downstream activities of transporting and selling beer.

The high productivity of beer manufacturers in the South Africa was an important driver of the beer sector's GVA contribution to GDP. On average, we estimate that each employee at a South African beer manufacturer generated a R 3 million GVA contribution to GDP in 2019.

increasing average productivity in the economy overall. This is valuable because productivity is the only mechanism that can sustainably increase wages and therefore living standards over the long-run.

**9x**

On average, beer manufacturers' employees were around nine times as productive as the average South African worker.

This was almost nine times the productivity of the average South African worker (at R 340,000 per worker). While this productivity is important to beer manufacturers themselves, it also has benefits for the wider economy. When highly productive employees interact with others in the economy - whether through a supply chain relationship, in business meeting, or by moving jobs - their knowledge and techniques can spread to other businesses,

Together, beer manufacturers and retailers supported an estimated 249,000 jobs in South Africa in 2019. This is around 1.5% of all jobs in South Africa, or one in 66 jobs in the country.<sup>7</sup> The employment was similar in magnitude to 67% of employment in Port Elizabeth.<sup>8</sup> Some 181,000 jobs were supported by beer manufacturing (73% of the total jobs supported), whilst the remaining 68,000 jobs were supported by downstream transportation and retail activities (27% of the total jobs supported).

<sup>4</sup> Individual figures may not always sum to totals due to rounding.

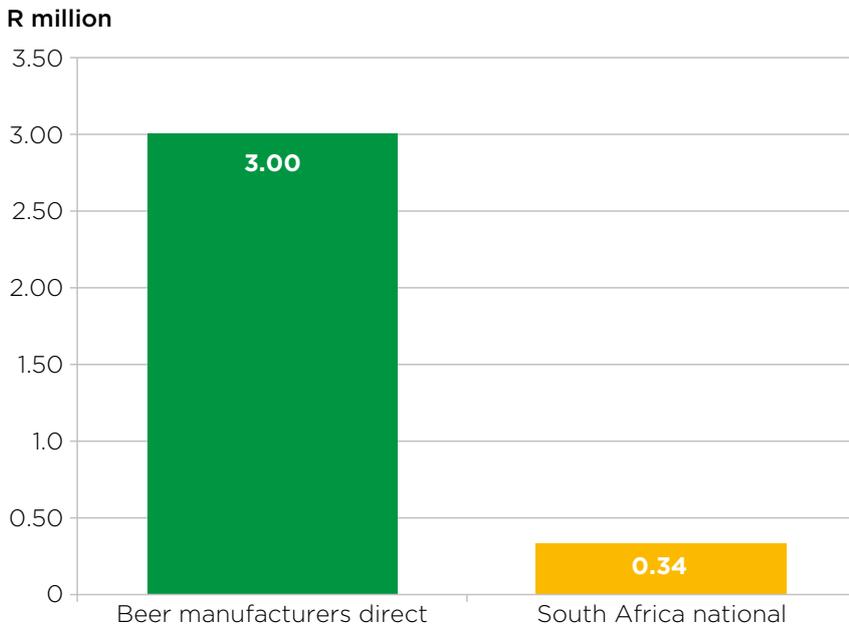

<sup>5</sup> GDP was R 5.6 trillion in South Africa in 2019.

<sup>6</sup> GDP was R 290 billion in Pretoria in 2019.

<sup>7</sup> There were 16.3 million jobs in South Africa in 2019.

<sup>8</sup> Employment was 370,000 in Port Elizabeth in 2019.

**Productivity (GVA per worker) at South African beer manufacturers compared to national average**

Source: Oxford Economics

**1 in every 66 jobs** 

The beer sector was linked to 1 in every 66 jobs in South Africa in 2019.

The beer sector is also important for government revenues in South Africa. In 2019, the tax payments directly remitted or stimulated by the South African beer sector totalled R 43 billion; of this, R 26 billion (or 60% of the total tax contribution) is estimated to have come from sales tax and excise duties from beer sales.

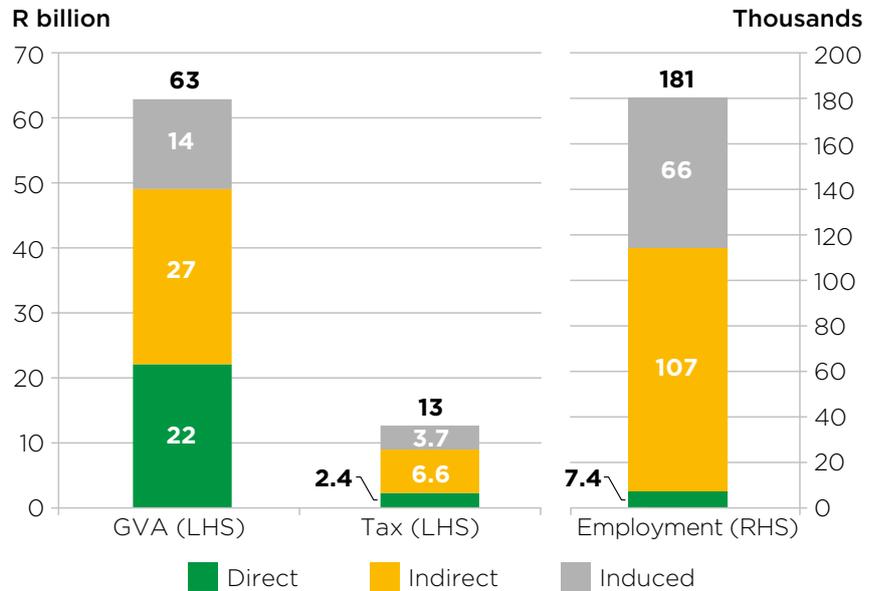

# BEER MANUFACTURERS' IMPACT IN SOUTH AFRICA

By marketing and brewing beer, beer manufacturers themselves have an important impact on South Africa's economy. In 2019, beer manufacturers' total economic contribution amounted to R 63 billion in GVA contributions to GDP, more than 180,000 jobs, and R 13 billion in tax revenues. This is equal to 1.1% of South African GDP, 1.1% of national employment, and 1.0% of government revenue, respectively.

We estimate that by brewing beer, South African beer manufacturers directly generated a R 22 billion GVA contribution to South Africa's GDP, provided 7,400 jobs, and made R 2.4 billion worth of tax payments in 2019.

Beer manufacturers procure a large amount of goods and services in South Africa. This procurement means beer manufacturers stimulate a substantial indirect impact in the country.

**Total GVA, employment, and tax supported in South Africa by beer manufacturers, 2019**

Source: Oxford Economics

In 2019, extrapolating from data provided by four major beer manufacturers indicate that beer manufacturers as a group, both domestic and international, bought R 33 billion worth of goods and services from South African companies. Of the total procurement in South Africa by beer manufacturers, the vast majority, R 32 billion (or 97%), was purchased by South African beer manufacturers; another R 1.1 billion (3%) worth of South African goods and services were exported to overseas beer manufacturers.

Of the total procurement in South Africa R 33 billion by beer manufacturers, business services providers (such as accountants, engineers, marketers, and legal services providers) benefitted from R 7.6 billion worth of

payments (or 23% of beer manufacturers' total purchases), followed by mineral product manufacturers including those that make cans (R 6.7 billion, or 20%), and then transportation and storage firms (R 6.7 billion, or 20%). We estimate that through this procurement, beer manufacturers supported R 27 billion in GVA contributions to South Africa's GDP, 107,000 jobs, and R 6.6 billion in tax revenue.

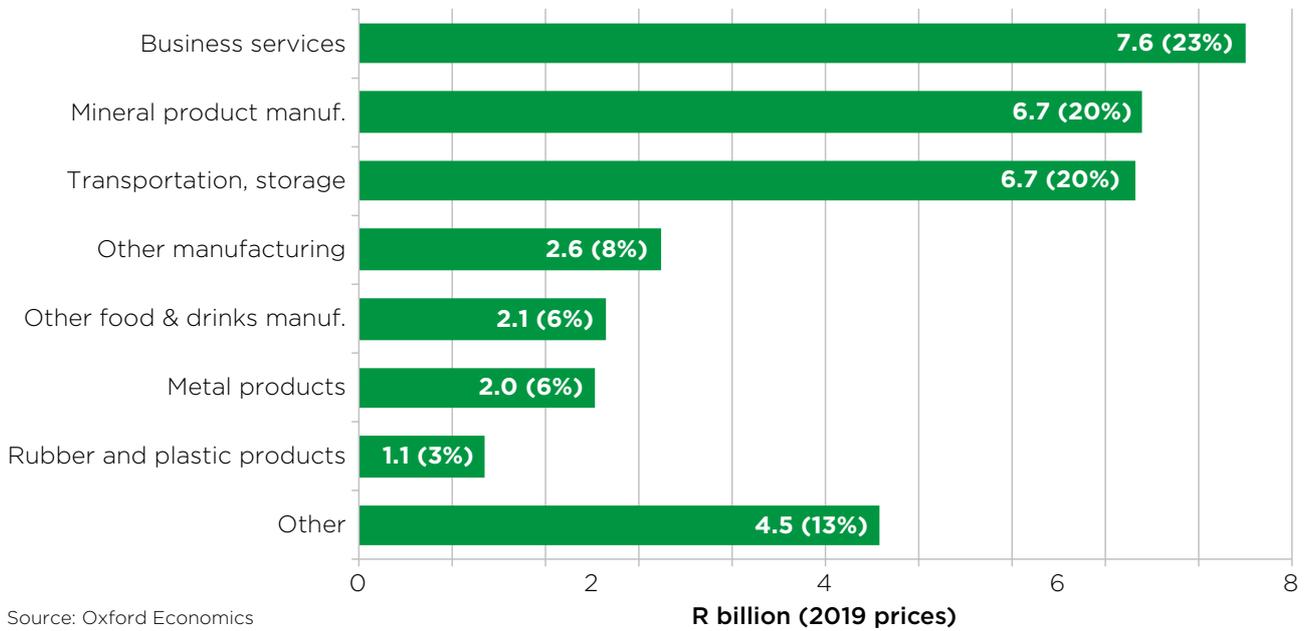

Finally, the beer sector pays a large amount of wages, which further stimulates economic activity, jobs and taxes within South Africa. Through this wage-induced channel of impact, we estimate that in 2019 beer manufacturers supported R 14 billion in GVA contributions to GDP, 66,100 jobs, and R 3.7 billion in tax revenue.

## R33 billion in procurement

R 33 billion in goods and services bought by beer manufacturers from South African companies.

**Beer manufacturers' procurement from South African suppliers<sup>9</sup>**

<sup>9</sup>Other food & drinks manufacturing refers to non-beer food and drinks manufacturing (a category that includes things like adjuncts, bulk water, carbonates, flavour, and yeast).

# BEER DISTRIBUTORS, RETAILERS, AND HOSPITALITY SECTOR'S IMPACT IN SOUTH AFRICA

As the consumer-facing portion of the beer sector, beer's downstream value chain is responsible for a large amount of economic activity. Beer's downstream value chain is comprised of wholesalers, retailers, restaurants, bars, pubs, clubs, sports arenas, and other hospitality venues that sell beer to final consumers. In total, the retail and hospitality sector sold R 73 billion worth of beer to consumers in South Africa in 2019.

The retail and hospitality sector directly generated a substantial share of the total impact. We estimate that the direct economic contribution from selling beer to consumers in South Africa amounted to R 2.6 billion in GVA in 2019. The service of transporting and selling beer is labour intensive, which creates a large number of jobs in the downstream value chain; thus, we estimate that the downstream value chain generated 42,000 jobs in 2019. In addition, beer's downstream value chain generated R 29 billion in tax payments to the South African government.<sup>10</sup>

The retail and hospitality sector supports further economic activity by buying goods and services from South African suppliers. We estimate that firms involved in the selling and transporting of beer bought R 3.3 billion worth of goods and services from South African firms in 2019. Through the indirect channel of impact, we estimate that, in 2019, beer's downstream value chain supported R 3.3 billion in gross value added, 15,000 jobs and R 0.8 billion in taxation in South Africa.

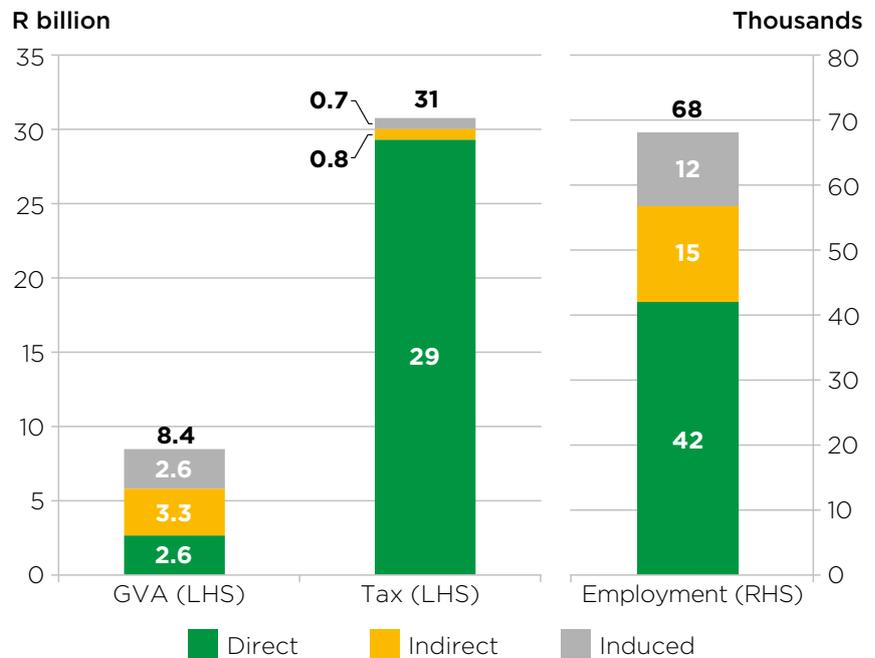

## R73 billion

The beer sector sold R 73 billion worth of beer to final consumers in South Africa in 2019.

The total GVA contribution by the downstream value chain—including direct, indirect, and induced impacts—amounted to an estimated R 8.4 billion in South Africa in 2019. This is equivalent to 0.2% of South African GDP. The jobs supported by beer's downstream value chain totalled 68,000, or about 0.4% of South African employment. Finally, the tax revenue generated by beer's downstream value chain helped raise R 31 billion, about 2.3% of government revenue.

**Total GVA, employment, and tax supported by the global beer distributors, retailers, and hospitality in South Africa, 2019**

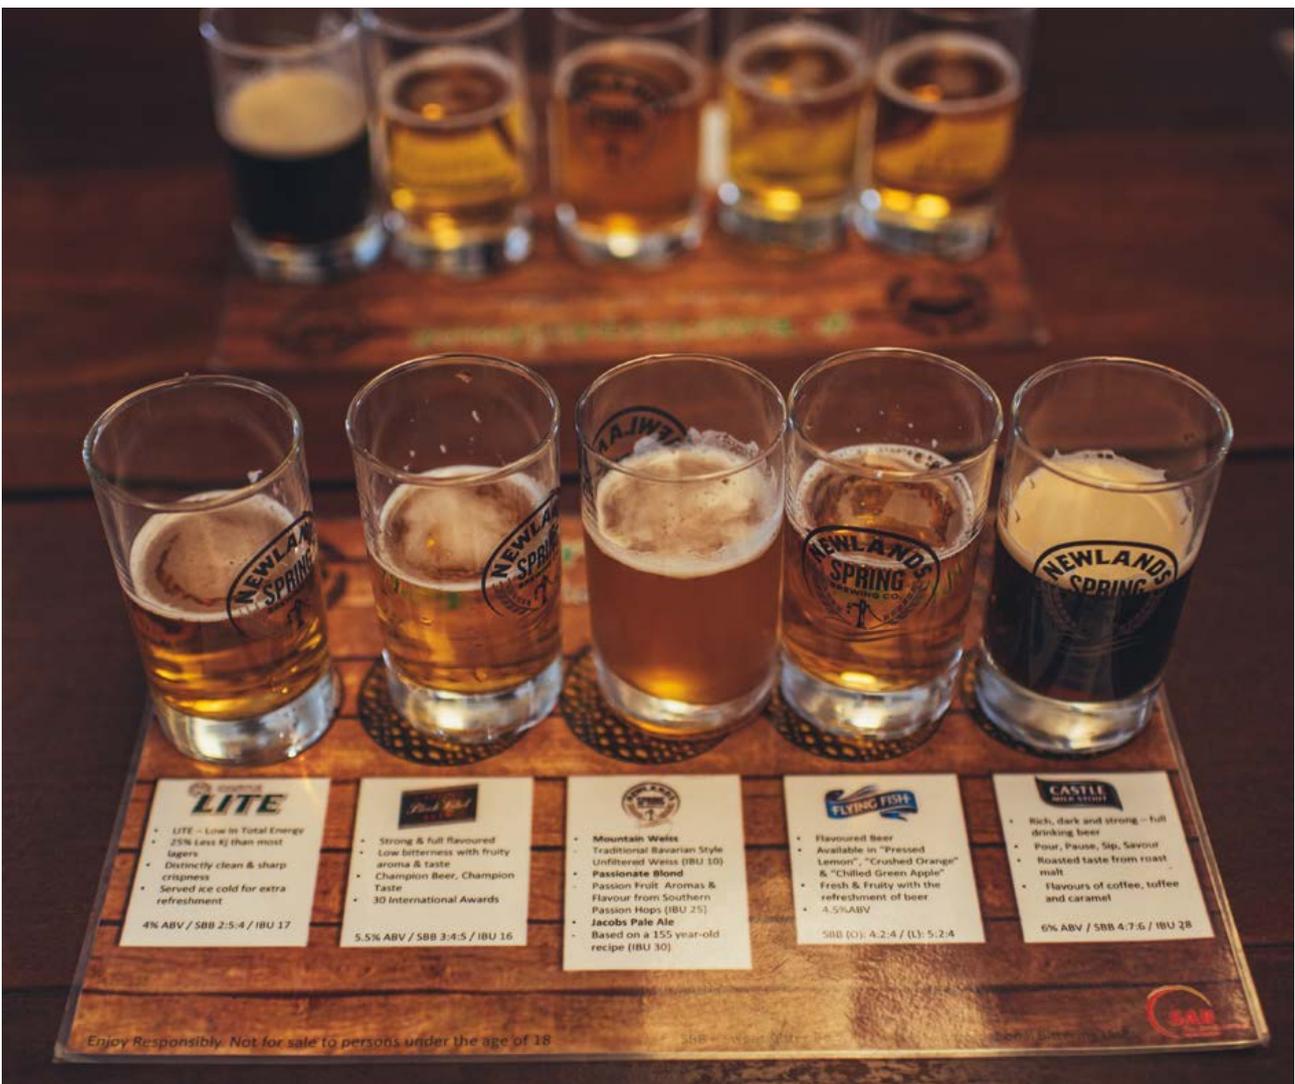

Source: Oxford Economics

Additional economic activity is stimulated in South Africa because the retail and hospitality sector pays staff wages and supports wage payments in the supply chain. Through the induced channel of impact, we estimate that a R 2.6 billion GVA contribution to GDP, 12,000 jobs, and R 0.7 billion in tax revenue were supported by beer's downstream value chain in South Africa in 2019.

As the figures show, the downstream value chain is an important source of jobs. To put these figures into perspective, the direct employment in the downstream value chain of 42,000 jobs means that for every job at a South African beer manufacturer there were six jobs directly employed in South Africa's downstream value chain. When we consider the downstream activities and

the upstream supply chain (i.e., the direct and indirect channels), we see that 22 jobs are supported for every job at a South African beer manufacturer. Including the consumer economy (the induced channel) means that this number rises to 33 jobs for every job at a beer manufacturer.

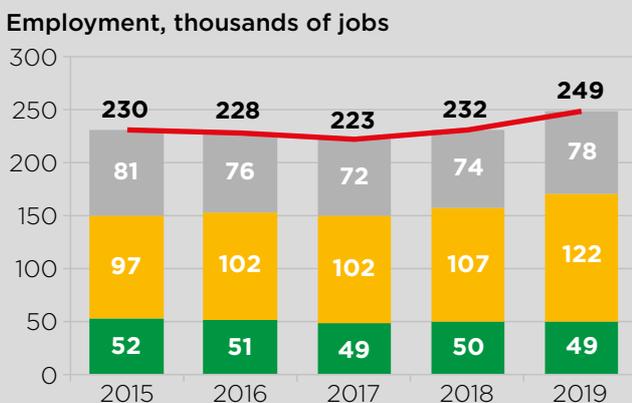

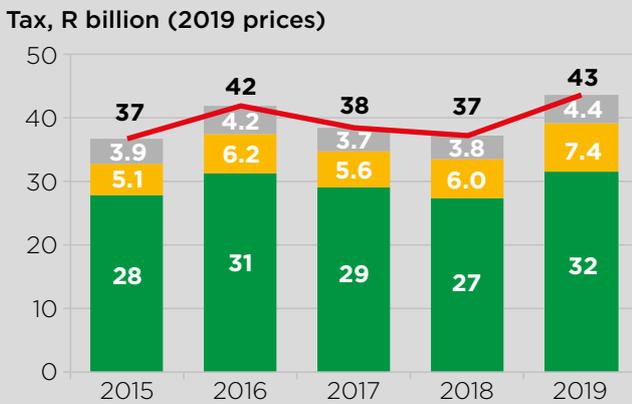

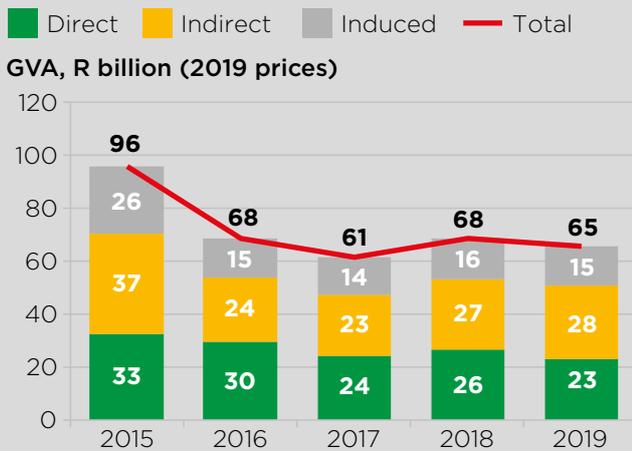

# ANNEX

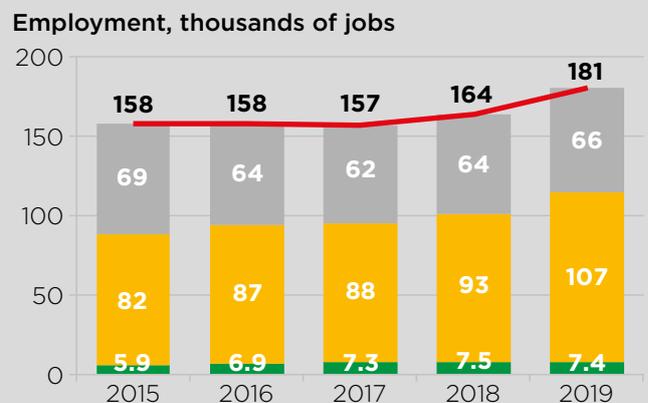

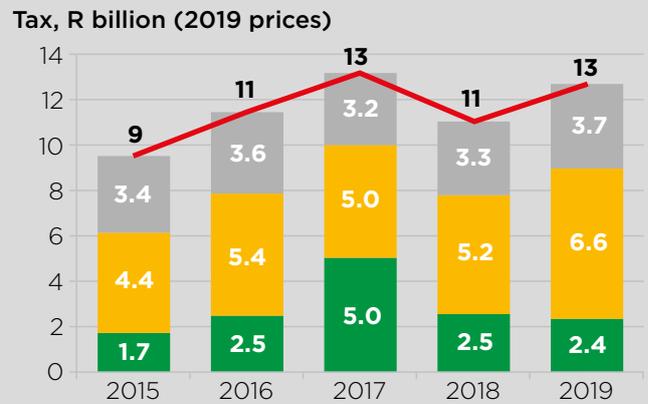

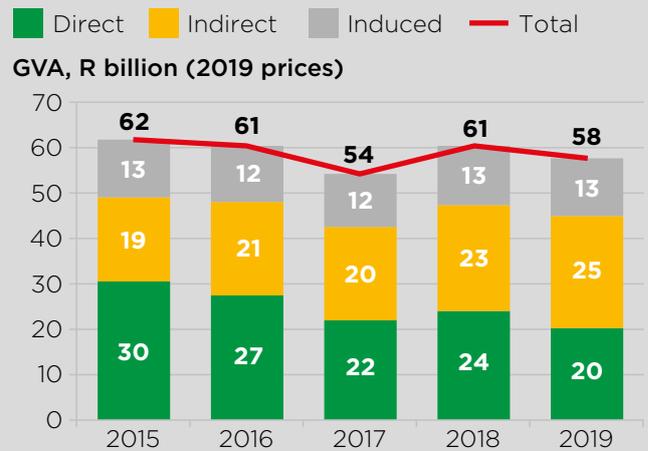

The following charts show how the beer sector’s economic impact has evolved in South Africa between 2015 and 2019. The first set of charts shows the direct, indirect, and induced impact in terms of GVA, jobs, and tax revenue for both beer manufacturers and distributors; the second set isolates the impact beer manufacturers supported, and the third set shows the impact that distributors stimulated.

# OXFORD ECONOMICS

Oxford Economics was founded in 1981 as a commercial venture with Oxford University's business college to provide economic forecasting and modelling to UK companies and financial institutions expanding abroad. Since then, we have become one of the world's foremost independent global advisory firms, providing reports, forecasts and analytical tools on more than 200 countries, 100 industries, and 7,000 cities and regions. Our best-in-class global economic and industry models and analytical tools give us an unparalleled ability to forecast external market trends and assess their economic, social and business impact.

Headquartered in Oxford, England, with regional centres in New York, London, Frankfurt, and Singapore, Oxford Economics has offices across the globe in Belfast, Boston, Cape Town, Chicago, Dubai, Dublin, Hong Kong, Los Angeles, Melbourne, Mexico City, Milan, Paris, Philadelphia, Stockholm, Sydney, Tokyo, and Toronto. We employ 450 staff, including more than 300 professional economists, industry experts, and business editors—one of the largest teams of macroeconomists and thought leadership specialists. Our global team is highly skilled in a full range of research techniques and thought leadership capabilities from econometric modelling, scenario framing, and economic impact analysis to market surveys, case studies, expert panels, and web analytics.

Oxford Economics is a key adviser to corporate, financial and government decision-makers and thought leaders. Our worldwide client base now comprises over 2,000 international organisations, including leading multinational companies and financial institutions; key government bodies and trade associations; and top universities, consultancies, and think tanks.

## November 2022
